

Installation Guidelines

FOR PINNACLE CLAD WINDOWS

Installer

- Read instructions completely before attempting installation. Failure to follow these guidelines will void the Windsor warranty coverage, written or implied.
- Always provide a copy of these instructions to the homeowner.
- These instructions are consistent with ASTM 2112 “Standard Practice for Installation of Exterior Windows, Doors and Skylights” into common wall constructions. For installation into air barrier sheathing systems such as ZIP System, refer to our supplemental installation instructions at www.windsorwindows.com. Contact your architect or construction professional for installation into other building designs or construction methods.
- Regional codes and environmental conditions may require installation that is different from these guidelines. It is your responsibility to ensure that local codes and ordinances are followed.

Warning

- ⚠ **Work Safe!** Always wear proper eye and hearing protection when installing or adjusting Windsor products.
- ⚠ **Use Power Tools Properly!** To avoid personal injury, always follow manufacturers’ instructions for safe operation of power tools.
- ⚠ **Ladder Safety!** Working at elevated levels can be hazardous. Always use ladders and scaffolding properly. Consult manufacturers’ guidelines for safe use of these types of equipment.
- ⚠ **Safety Glazing!** Windsor products do not contain safety glazing unless specifically ordered that way. Use caution – injury could result if glass is broken and fragmented. Building codes require safety glazing for windows installed in certain areas. Consult your local building code official for guidelines.

Important

- Windsor reserves the right to change the information contained in these guidelines without notice.
- Maintain a minimum of 1/4" between the window frame and any trim, siding or masonry.
- Use of Windsor products in barrier EIFS systems (synthetic stucco) is not recommended. To do so will void all warranties (written or implied) and Windsor Windows & Doors will not be held responsible for any claims or damages resulting from water infiltration.
- Steel fasteners will corrode when used with ACQ pressure treated lumber. Use corrosion-resistant fasteners (such as stainless steel) when installing windows in or around these types of materials.
- Window nailing flanges and drip caps (integral or applied) do not take the place of window flashing. All windows and doors must be properly flashed and sealed around the perimeter.
- Certain Windsor double hung products are furnished with jamb jacks. Jamb jacks are not required for installation, but rather future adjustment to the frame width at the middle of the unit. Jamb jacks should not be used in place of shims. Refer to Step 4 for shimming guidelines.

Handling and Storage

- Always carry door units upright. Do not carry flat! Doing so could result in damage to the unit.
- Do not store units outside.

www.windsorwindows.com

Tools Needed

- Safety Glasses

- Ladder / Scaffolding

- Utility Knife

- Square

- Hammer (or nail gun)

- Tape Measure

- Caulk Gun

- Stapler

- Level

Materials Needed

- Backer Rod
 - 1/4"-1/2" diameter closed cell foam
- Insulation
 - Minimally expanding low pressure polyurethane window and door foam
- Shims
 - Made of cedar or synthetic material
- Roofing Nails
 - 11 ga. x 2-1/2" galvanized
- Silicone Sealant
 - 100% Silicone
- Flashing
 - Self-adhesive flexible flashing that complies with AAMA-711
- Rigid Metal Flashing and Fasteners
 - Applied to head brickmould

LEAD PAINT AND EXISTING WINDOW DISPOSAL:

- A) Before any remodel or renovation, make sure to identify any potential lead paint issues and take necessary steps to reduce the risk of lead contamination.
- B) The U.S. Environmental Protection Agency (EPA) has issued a "Lead Renovation, Repair and Painting Rule (RRP)" for remodelers of older homes and buildings. This rule requires training and certification in lead-safe work practices for firms performing renovation, repair or painting on homes and child-occupied facilities built prior to 1978.
- C) For more information regarding procedures for dealing with lead paint, please visit EPA's website at **www.epa.gov/lead**.
- D) When removing existing windows, make sure to wear appropriate personal protective equipment. Extra precautions should be taken to protect others and property within the vicinity and below the removal window and surrounding components.
- E) Consult with local waste authorities on the proper recycling or disposal of old window components.

ATTENTION! ARBITRATION AGREEMENT; JURY TRIAL WAIVER; CLASS ACTION WAIVER. By purchasing, installing or using this product, you agree to arbitrate any dispute you may have with Windsor relating to your Windsor products, and to waive your rights to a jury trial and to participate in class-action or class-arbitration proceedings, relating to any such disputes. For more details, and to learn how **YOU CAN OPT OUT OF THIS ARBITRATION AGREEMENT AND THESE WAIVERS**, please go to www.windsorwindows.com/support/DisputeResolution.

Step 1: Inspect Unit

Before Installation:

- A) Remove all shipping packaging material (blocks, pads, protectors, stretch wrap).
- B) Do not remove double hung belly bands (white strap) until after install.
- C) Inspect unit for any damage or defects.
- D) Verify that the window unit is the correct size and configuration.
- E) Make sure the unit operates properly.
- F) Contact your nearest Windsor distributor if there are any problems.

Step 2: Prepare Rough Opening

- A) Measure and verify the size of the rough opening. The rough opening should be $\frac{3}{4}$ " larger in width and $\frac{1}{2}$ " larger in height than the frame size.
- B) For windows with clad exterior casings, additional nailer studs may be required around the perimeter of the rough opening.
- C) Framing recommendations for radius and geometric windows are shown in Fig. 1 below.

FIG. 1

- D) Verify the rough opening is flat, plumb, level and square. (Fig. 2)
- E) Take diagonal measurements to check for square. (Fig. 2)
- F) Make sure the bottom sill area of the opening does not slope toward the interior.
- G) Make an "I-Cut" in the weather-resistant barrier (WRB). Begin with a horizontal cut along the bottom and the top of the rough opening. Then make a vertical cut in the center from top to bottom. (Fig. 3)

FIG. 2

FIG. 3

- H) From the exterior, cut the top of the WRB as shown to form a flap. (Fig. 4)
- I) Temporarily tape this top flap up. (Fig. 4)
- J) Fold side flaps into rough opening and secure to inside wall. Cut off excess flap if desired.

FIG. 4

- K) Optional cutting patterns for radius and geometric shapes are shown in Fig. 5 below.

FIG. 5

Step 3: Flashing the Sill

A) IMPORTANT:

- Use flashing that is 6" minimum in width.
 - Flashing must meet AAMA-711 performance requirements.
 - Adhesive or mechanically-fastened flashing may be used.
- B) Measure the width of the rough opening. Cut a length of flashing that is 12" wider than the rough opening. This will allow you to run the flashing 6" up each side.
- C) Cut 1-1/2" slits at each end of the flashing as shown below. (Fig. 7)

FIG. 7

- D) Apply sill flashing to the rough opening as shown below. (Fig. 8)
- E) If you are using non-adhesive flashing:
- Staple flashing into place.
 - Seal corner notches using 100% neutral cure silicone sealant.
- F) Flashing tape must cover the entire sill plate. If needed, apply an additional flashing piece over the first one (start from the exterior and work toward the interior). Maintain a minimum 1" overlap. (Fig. 9)

FIG. 8

FIG. 9

Step 4: Window Installation

For Impact-rated products and/or any products installed in the Florida or Texas TDI regions, supplemental anchoring methods may be required. Refer to supplemental instructions attached to unit or www.windsorwindows.com for further information.

- A) Remove all packaging material (blocks, pads, protectors, stretch wrap).
- B) Do not remove double hung belly band (white strap) until after install.
- C) Inspect and verify the following:
 - a. The window is the correct size and specification.
 - b. The unit is free from any damage or defects.
- D) Contact your nearest Windsor distributor if there are any problems with Step C above.
- E) If windows were ordered with aluminum nailing fin, skip to Step G.

FIG. 10

FIG. 11

- F) Apply corner pads at each nailing fin corner.
 - a. Apply the adhesive side of the pad to the outside of the nailing fin corner and fold over the nailing fin. (Fig. 10)
 - b. Apply small amount of silicone on the interior side of the small void in the corner of the frame and pad. (Fig. 11)
- G) Apply sealant:
 - a. On all four sides, apply a 1/4" continuous bead of silicone along the backside of the nailing fin where it meets the frame. (Fig. 12)
 - b. On the head and side jamb nailing fins, run a 1/4" continuous bead of silicone in line with and completely covering the nailing flange holes. (Fig. 13)
 - c. On the sill nailing fin, run a discontinuous bead to allow for any drainage. Alternate using a 6" long bead with 1" gaps as shown below. (Fig. 13)

FIG. 12

FIG. 13

- F) Apply corner pads at each nailing fin corner.
- Apply the adhesive side of the pad to the outside of the nailing fin corner and fold over the nailing fin. (Fig. 10)
 - Apply small amount of silicone on the interior side of the small void in the corner of the frame and pad. (Fig. 11)
- G) Apply sealant:
- On all four sides, apply a 1/4" continuous bead of silicone along the backside of the nailing fin where it meets the frame. (Fig. 12)
 - On the head and side jamb nailing fins, run a 1/4" continuous bead of silicone in line with and completely covering the nailing flange holes. (Fig. 13)
 - On the sill nailing fin, run a discontinuous bead to allow for any drainage. Alternate using a 6" long bead with 1" gaps as shown below. (Fig. 13)

FIG. 12

FIG. 13

- Set the window into the rough opening. Center the unit in the opening, making sure there are equal gaps on both sides of the window.
- Temporarily tack the window into place using 2-1/2" galvanized roofing nails through the pre-punched holes on one top corner of the nailing flange. Do not drive the nails in fully.
- Shim underneath the window until sill is level. Start with a shim at each corner no more than 1" from jamb corner. Add additional shims spaced evenly from the center of unit, and make sure shims are spaced no more than 16" apart. Failure to evenly support sill can result in improper operation and performance and will void the warranty. See Fig. 14 for shim location guidelines.
- Check the unit for square using diagonal measurements. Shim window to ensure the unit is square. Multiple units must have shims under each mull. Casement units over 48" in height must have shims placed at the center to prevent bowing of jambs.

FIG. 14

Step 5: Complete Flashing

- A) Cut and apply side flashing. Side flashing should run from the bottom of the sill flashing to 8" above the rough opening. (Fig. 15)
- B) If non-adhesive flashing is used, make sure all staple holes are sealed with silicone.
- C) Cut and apply head flashing. The head flashing should run slightly past the edge of the side flashing as shown in Fig. 16. For radius top windows, refer to Fig 17.
- D) Flip down the top flap of the WRB.
- E) Tape the cut seams of the WRB. (Fig. 18)

Head Flashing Application for Radius Windows

FIG. 17

FIG. 15

FIG. 16

FIG. 18

Step 6: Seal the Exterior

- A) After siding or wall exterior is complete, apply backer rod and silicone sealant between the window frame and siding material on both sides and sill. Sealant bead must extend to back of accessory groove (3/8" Min.)
- B) **WARNING:** Maintain a minimum of 1/4" between the window frame and any trim, siding or masonry. Failure to do so will forfeit all warranties (written or implied). Windsor Windows & Doors will not be held responsible for any claims or damages resulting from failure to follow these instructions.

Step 7: Complete the Interior

- A) On sides and top, insulate between the window frame and the rough opening using minimally expanding window and door spray foam insulation. Use caution to not overfill the gap causing the jambs to bow. It is not recommended to apply trim to the unit until the foam has cured to allow the excess to escape.
- B) Apply a bead of sealant between the sill flashing and window frame along the sill and 6" up on the sides.
- C) Operate window unit to ensure proper operation. Sash will not operate correctly if window is out of square, over-shimmed or over-insulated.
- D) Remove all labels or shipping materials.
- E) Properly finish all wood interior components within 60 days of installation. See the Care and Use Guide at www.windsorwindows.com for further details on finishing Pinnacle clad products.
- F) **IMPORTANT:** Do not stain or paint any hardware or vinyl components.

Casement Windows Operating Sash Adjustment: The sashes of Casement Operating Windows must be adjusted to ensure proper operation and performance. The sashes must be adjusted so the gap between the sash and the frame is consistent. The width of the gaps on the left and right should be similar. The width of the gaps on the top and bottom should be similar. All the gaps should be uniformly straight from one end to another. If you have questions, please see Windsor's Care and Use Guide at www.windsorwindows.com/support/service-information. **CAUTION: Misaligned sash will result in a misaligned seal which will adversely affect the performance of the window. As a result, the failure to maintain proper sash adjustment will void Windsor's warranty.**

To adjust the casement sash, first fully open the window. Next, slip the adjustment wrench (Windsor part number 540036) onto the base of the stud, found between the support arm and the track of the lower hinge. Swinging the wrench away from the lock side of the window will decrease the amount of sash drag.

The maximum adjustment is reached when the stud flats are parallel to the track. Note: Turning the stud flats beyond parallel will not increase adjustment.

For even more adjustment, a similar procedure can be used on the upper hinge. Upper hinge adjustment is made by swinging the wrench toward the lock side of the window. Maximum adjustment is obtained when the stud flats are parallel to the track.

Stud may be adjusted with 3/8" or 7/16" wrench if support arm is removed before adjustment.

Pre-Finished Interiors: CAUTION: Windows with pre-finished interiors must be protected from dents, scratches, scrapes, or other blemishes! Windsor does not warrant against dents, scratches, scrapes or other damage to pre-finished interiors after the windows are delivered by Windsor. After the windows are delivered by Windsor, extreme care must be taken by those moving the windows, or those working on or around the windows, to protect pre-finished interiors from dents, scratches, scrapes or other blemishes.

If you have any questions regarding your Windsor Windows, please contact Windsor Windows & Doors directly at 1-800-218-6186. Or you can visit us online at www.windsorwindows.com, where you will find helpful information as well as our Care and Use Guides, which will assist you in preserving your windows and patio doors. While you are at our site, you can also complete and submit the form on the Contact page, and one of our window specialists will promptly answer your question.

Care and Use

For information about the care and use of your Windsor products, please visit the www.windsorwindows.com/support, and click "Warranty, Care & Installation," where you find a link to our Care and Use Guide. Or contact your local independent Windsor distributor and ask for a copy of the Care and Use Guide, which contains information on finishing, cleaning, what to look for during yearly inspections, general maintenance tips, sash/panel adjustment, sash/panel removal, screen removal and information on condensation. You should inspect your windows annually.

Warranties

You can find a copy of our current Warranty at the website, under the "Support" tab. If you have Windsor products that are older, please contact Windsor at 1-800-218-6186, and we will provide a copy of the applicable warranty.
