

Mulling Restrictions

Wood Products

WINDSOR
WINDOWS & DOORS
A WOODGRAIN MILLWORK COMPANY

With the improved energy efficiency of windows and specifically high performance glass options, the entire residential industry is seeing larger and larger window configurations being designed into structures.

The increasing popularity of these large window configurations has raised safety and handling concerns here at Windsor, at your location(s) and in the field. The “man handling” experienced by these large configurations prior to installation can often compromise the structural integrity, just because of the sheer size and weight of the mull configuration. Therefore, Windsor Windows & Doors has implemented mull restrictions for Pinnacle Select shown below:

Restrictions: Maximum 96 square feet (overall mull configuration)
Maximum 12 feet for the longest combined frame dimension

Windows
