

Mulling Restrictions Cellular PVC Products

WINDSOR
WINDOWS & DOORS
A WOODGRAIN MILLWORK COMPANY

With the improved energy efficiency of windows and specifically high performance glass options, the entire residential industry is seeing larger and larger window configurations being designed into structures. Windsor also offers some of the largest single windows available as standard product, including up to 60 square feet for Cellular PVC Special Radius and Direct Sets.

The increasing popularity of these large window configurations has raised safety and handling concerns here at Windsor, at your location(s) and in the field. The “man handling” experienced by these large configurations prior to installation can often compromise the structural integrity, just because of the sheer size and weight of the mull configuration. Therefore, Windsor Windows & Doors has implemented mull restrictions for all cellular PVC window product lines: Legend Series.

**Restrictions: Maximum 72 square feet (overall mull configuration)
Maximum 12 feet for the longest combined frame dimension**
